

Smart Toolbox for Engaging Citizens into a People-Centric Observation Web

Executive Summary

This deliverable provides the SCENT Data Management Plan, which details how data will be stored, tagged and archived throughout and after the project. As SCENT has opted in for the Open Research Data Pilot, FAIR (Findable Accessible Interoperable Reusable) data policies underpin the usage of data during the course of the project and beyond. Moreover, the deliverable explains how the project and its activities are compliant with established EC and national guidelines for the Protection of Personal Data (POPD). The Data Management plan deals with how data will be stored in a secure and privacy-safeguarding way, and how its reuse and sharing after the project will be ensured. The deliverable also provides governance arrangements on how to carry out the data management plan in practice. The deliverable is considered a living document that will be updated over the course of the project; in particular prior to the mid-term and the final reviews or on-demand, when changes in policies by the EU Commission or the consortium synthesis have occurred or when a new innovation potential (e.g. patent) has been identified.
